

Tornado UI – Starter Template Structure Explain

This is the structure of the core start-up template and explain of all [php] files and [directories]. → [[Gitlab Starter Project](#)].

❖ Tornado-WordPress [Theme Root Directory]

- ♦ **assets** [Theme CSS/JavaScript/Images Files].
- ♦ **inc [includes]** [Theme Functions and Design Templates/Blocks Parts Directory].
- ♦ **functions.php** [Theme Functions Call Back and Run].
- ♦ **index.php** [The Main Home Page File and if we have multiple home pages you can use **home.php** / **front-page.php** files as extra options].
- ♦ **header.php** [Theme Head Tag **Not the Designed Header**].
- ♦ **footer.php** [Theme Footer the HTML/Body Closing Tags and Footer Hook for Plugins and Scripts **Not the Designed Footer**].
- ♦ **sidebar.php** [Sidebar Widgets Template File].
- ♦ **style.css** [Theme Copyrighting CSS File only Use for Copyright].
- ♦ **rtl.css** [the Style.css RTL Version for Supporting RTL Languages only Use for Copyright].
- ♦ **404.php** [Error 404 Redirect Page].
- ♦ **comments.php** [the Comments Design Template].
- ♦ **singular.php** [the Rich Content Template Page used for posts and custom post types and pages when **single.php** or **page.php** are not found].
- ♦ **archive.php** [used when request posts by **category, tag, taxonomy, author, or date**. Note: if any of this templates file exist will be overridden].
- ♦ **author.php** [The author page template is used whenever a visitor loads an author/member profile page].
- ♦ **search.php** [The search results template is used to display a visitor's search results].
- ♦ **attachment.php** [The attachment template is used when viewing a single attachment like an image, pdf, or other media file].
- ♦ ----- Custom Templates Files Naming Method [**Note anything takes slug-name as value can also work with id number**] -----
- ♦ **single-{post-type-slug}.php** [custom single template file used when a visitor requests a single post from a custom post type].
- ♦ **archive-{post-type-slug}.php** [custom archive template file used when request a custom post type archive].
- ♦ **page-{slug}.php** [page template file used when request a specific page].
- ♦ **{name}-template.php** [Custom Page Template used for specifying page design templates options when creating pages].
- ♦ **category-{slug}.php** [Custom Category Template Targeted with the slug name or id Number].
- ♦ **tag-{slug}.php** [Custom Tag Template Targeted with the slug name or id Number].
- ♦ **taxonomy-{taxonomy-slug}.php** [Custom Taxonomy Template File].
- ♦ **taxonomy-{taxonomy-slug}-{term}.php** [Custom Taxonomy Template File Specified with Term Name].
- ♦ ----- Unused Files in this theme and the reason for that there is a global template for it which is all we need in WP.5 -----
- ♦ **single.php** [The Rich Content single post template is used when a visitor requests a single post] Replaced With [**singular.php**].
- ♦ **page.php** [The Rich Content of Custom Pages is used when request individual built-in pages template] Replaced With [**singular.php**].
- ♦ **home.php** [Extra Home Optional Page].
- ♦ **front-page.php** [Extra Home Optional Page].
- ♦ **category.php** [The category template is used when request posts by category] Replaced With [**archive.php**].
- ♦ **tag.php** [The tag template is used when request posts by tag] Replaced With [**archive.php**].
- ♦ **date.php** [The date/time template is used when posts are requested by date or time] Replaced With [**archive.php**].
- ♦ **taxonomy.php** [The taxonomy term template is used when a visitor requests a term in a custom taxonomy]. Replaced With [**archive.php**].
- ♦ **searchform.php** [Search Form Template File].
